

# Dual Track Configuration

**Dual track** provides a second track that allows the Bug Blocker door to work independently of your solid door.

The advantage is that you can decide how much airflow is allowed in by the positioning of your original door. Brush seal and steel side plates are provided to completely seal the sides between the two tracks preventing bugs or debris from sneaking in the sides and top. Both doors can be left full up or kept in the full down position. Manual operation or

either door can be motorized independently.
