

Bug Blocker™ Doors

RASCO
INDUSTRIES, INC.

www.bugblocker.com

LET THE FRESH AIR IN AND KEEP THE PESTS OUT!

Strong stainless steel screen mesh doors for industry. Award winning Bug Blocker doors are designed to add security, ventilation, and pest control to your loading dock doors. Since 1992 we've worked closely with major food packaging and processing plants and a USDA laboratory to assure a product design and screen selection to meet rigorous needs and high standards.

The Bug Blocker door retrofits to your existing door. Working in conjunction with your door we add a switch mechanism, and a set of horizontal tracks.

You can also choose the optional dual track with its own tracks and side sealing plates, this allows each door to work independently. We custom make each Bug Blocker screen door for a perfect fit to make sure your opening is completely sealed for peace of mind and happy inspectors. A natural barrier to prevent insects, pests, birds, rodents and human intruders from entering your facility while keeping your inventory and employees safe.
