LET THE FRESH AIR IN & KEEP THE BUGS OUT!

Summer's heat can often drive you to leave your doors open providing an open invitation to every bird, bee, mosquito, and rodent in the vicinity. Open doors are a security concern in this day and age. Bug Blocker's Service Door Screen Insert (SDSI) can help you let the fresh air in without risking your inventory to theft. If your inspectors are telling you to keep the door shut, this may be your solution to add ventilation, security, and pest control to your facility's service door.

The strong aluminum frame and stainless steel wire mesh is designed to withstand the rigors of the toughest industrial environments. Our SDSI's have been in factory environments from -48 windchill to +110 degrees so we know they can take it. To seal the screen from the elements, add an optional cover panel.

**FSMA-AIB-USDA-
FDA-GFSI-HACCP**

SDSI Features:

- Fits all standard service doors
- Custom sizes available
- Frames secured by tamper proof screws
- Stainless steel wire mesh that meets Federal Specification STD A-A-1037B
 - .023 12 x 12 mesh for security doors
 - .011 30 x 30 mesh for food applications
- Mount above or below the panic opener (up to two per door)

SDSI Options:

- Security bars
- Clear 3/8" polycarbonate cover panel
- Solid Insert Panel - 22 gauge powder coated steel with 1" insulation
- Storage bracket for panels
